SUMMARY

Fullstack and AI engineer building agent systems for finance and health, where a wrong answer costs money or health. Deterministic, tested code decides every number and every safety verdict; the model routes and explains, and never gets a vote on the result. Built and shipped Paisa (AI CFO) and NutriScan AI end to end — **270+ tests** across shipped systems.

EXPERIENCE

AI Engineer - BodhX.ai Sept 2026 - Present

- Work on AI agent workflows, including tool integration, orchestration and response handling.
- Contribute to UI/UX and front-end development to improve navigation, usability and responsive layouts.
- Collaborate on API integration, debugging and testing; support sales efforts.

AI Engineer, Internship — MCPfy.ai Aug 2026

- Built and integrated the MCP-based developer tooling and APIs that customer agent workflows ran on; debugged reliability issues and tested the integrations other teams depended on.
- Shipped **MCPfy Inspector** — connect to a running MCP server, inspect the tools it actually exposes, call them and read the responses, surfacing schema/handler mismatches instead of leaving them to be inferred from odd agent behaviour.
- Designed and shipped the company marketing site, visual design through to the front end.

Stack: TypeScript · Next.js · Model Context Protocol · Tailwind · REST APIs · Vercel

PROJECTS

Paisa — AI CFO / AI-native ERP · askpaisaai.com Jul 2026 – Present

- Double-entry accounting engine where balances are projections over an **append-only journal**, with a hard architectural rule that the model never computes a number.
- **Grounding verifier** checks every figure in an answer against the tool outputs of that turn — untraceable numbers are rejected and rewritten, or the answer is not sent. **237 tests**.
- ASC 606 revenue recognition, multi-entity consolidation, Indian GST and filing deadlines, and a Stripe connector that refuses non-INR charges rather than converting at an unspecified rate.

Stack: TypeScript · Node · Anthropic API · PostgreSQL · Vitest · Vercel

NutriScan AI — clinical-safety health agent · nutritiscan.com 2026 – Present

- **Supervisor–specialist agent architecture** routes each question to the agent that owns it, with each specialist scoped to only the slice of the patient record it needs.
- Deterministic triage layer runs **before** the model reasons, fails closed on error and can end the turn: a model may raise suspicion, but nothing it says can lower a rule-derived verdict. Shipped on web and mobile.

Stack: TypeScript · Next.js · React Native · Anthropic API · Supabase · Vitest

Zylo — e-commerce storefront · zylo-delta.vercel.app 2026 – Present

- **194 products** in PostgreSQL behind Drizzle with search, faceted filters, product pages and a cart that survives a refresh; every product page prerenders at build time from the database.
- Catalogue module marked server-only so the build fails the moment a client component reaches for the database; reviews modelled as a first-class table rather than JSON on the product.

Stack: TypeScript · Next.js · PostgreSQL · Drizzle · Framer Motion · Vercel

agent-framework — grounded agent library extracted from Paisa 2026

- Tool registry that keeps each function beside the schema the model reads, an orchestrator that records every invocation, and a verifier that rejects any answer stating a figure no tool returned.
- The first test caught a real bug: tool output was searched as a single string, so a stray “INR 26” counted as grounded by a balance of “INR 32,42,600”. The fix went back into Paisa. **22 tests**.

Stack: TypeScript · Anthropic API · Vitest

TECHNICAL SKILLS

Languages TypeScript, JavaScript, Python, SQL, Java, C++

AI & Agents Anthropic API, OpenAI API, Model Context Protocol, LangChain, tool calling, structured output, multi-agent orchestration, intent routing, RAG, grounded generation, fail-closed escalation

Backend Node.js, Express, FastAPI, Django, REST, GraphQL, WebSockets

Frontend React, Next.js, React Native, Expo, Tailwind

Data PostgreSQL, Drizzle, Supabase, MongoDB, Redis, vector databases

Infra & Practice AWS, GCP, Docker, Vercel, GitHub Actions, CI/CD, Git, Vitest, code review, Agile

EDUCATION

B.A. English (Honours) — IGNOU, distance learning 2024 – 2027

Also: coursework in solutions architecture, AI/ML and agentic AI; open-source contributions across agent frameworks and developer tooling.
